

# Explore MinnaLearn's tried and tested AI tools

From LLMs, to audiovisual generation,  
and automation – these are our leading  
recommendations in each category 👍

# Welcome!

When searching online for AI tools there is an overwhelming amount of choices.

I've made this list to give you a selection top choices for each category. Tools I've tested and use daily in my life.

Explore and find your own best use cases!  
Sampo Leino / Head of Learning

# Generative AI by category index

**Tip:** Categories go from general to specialist and each tool is in order of ease of use

Suitable for general work

[Text](#) - AI Assistants

[Visual](#) - Image/video generation

[Audio](#) - Music and voice generation

[Automation](#) - Implement AI into processes

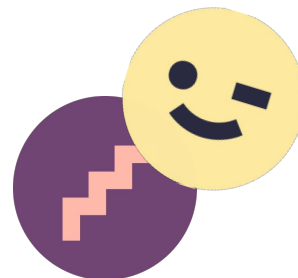

[Software Engineering](#) - Developer Tools and Platforms

Suitable for specialist work

# Text

Answering questions, producing text and researching topics

OpenAI

Free for basic use; paid plans for advanced features

# ChatGPT

An AI assistant for generating text, answering questions, and assisting with tasks.

**Did you know** 💡

You can [create your own GPTs](#) that combine instructions and extra knowledge from files you provide.

## What you could try...

See if you could use it to prepare for a challenging meeting. Describe the situation, goals and ask for tips.

ChatGPT has evolved to document analysis, searching the web, coding, image and video generation.

What can I help with?

Message ChatGPT

📎 📄 🌐 🗣️

🎨 Create image 📄 Summarize text 🗒️ Help me write 🎁 Surprise me 📄 Code

💡 Brainstorm 📍 Make a plan 🗨️ Get advice

Anthropic

Free for basic use; paid plans for advanced features

# Claude

Similar to ChatGPT, Claude focuses on safety and reliability in responses, making it suitable for users requiring dependable AI interactions.

## Did you know

In addition to chatting, Claude can make revisions of a document you are working on together.

### What you could try...

Try creating a blog article in your company's tone by uploading an example of your blog or front page and generating new ideas. Ask Claude to make it a document to keep track of versions.

The Rise of AI in the Workplace

Perplexity

# Perplexity AI

Combines conversational AI with real-time internet search, providing answers with cited sources, ideal for users seeking up-to-date information.

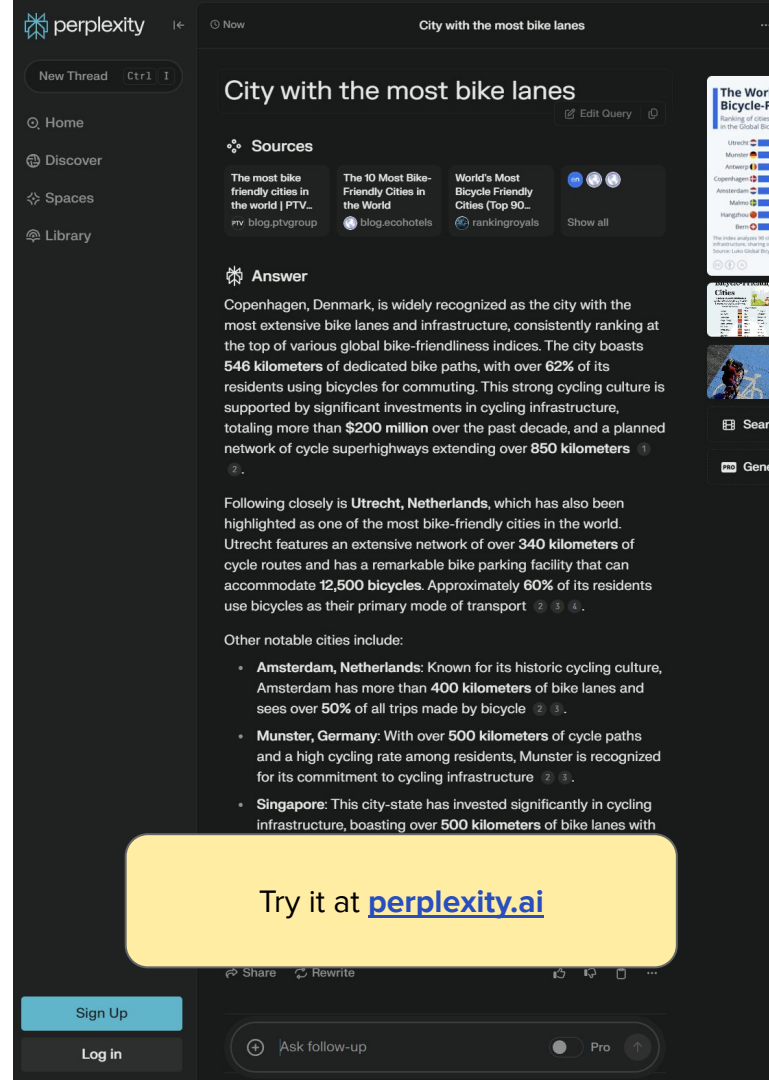

## Did you know

You can search for YouTube videos on Perplexity with Search Focus.

### What you could try...

See how this differs from researching a topic on google. Use a search question that includes what you are looking for and why.

Free for basic use; paid plans for advanced features

Crisp IM SAS

Free for basic use; paid plans for advanced features

# Crisp

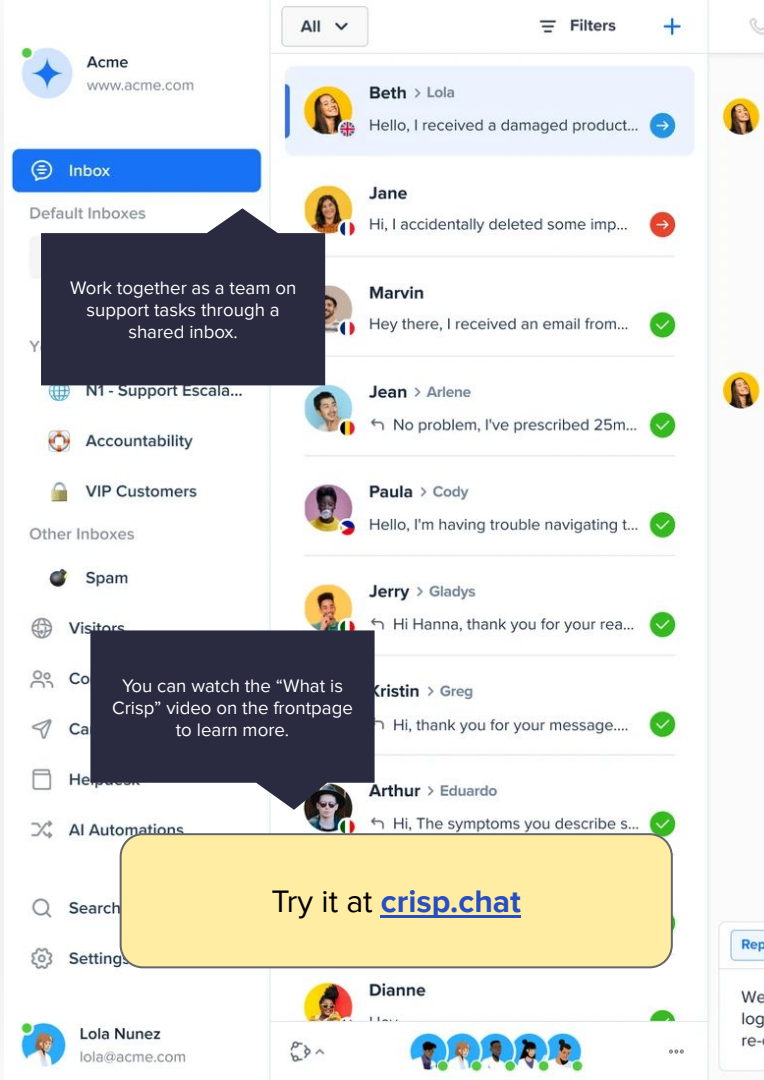

A customer support tool that uses AI to make work quicker and easier. It's great for small businesses and teams who want to improve how they handle support without overcomplicating things.

## Did you know

You can use live translations to support customers in their native languages.

### What you could try...

Create a free account and explore with your colleagues if/how your customer support could improve with this platform.

Notebook LM

# Notebook LM

An AI-powered research assistant from Google that helps you organize, summarize, and generate insights directly from your own documents and notes. It can also transform your materials into podcast-style dialogues for easier learning and reflection.

## Did you know

NotebookLM can create a “custom podcast” where two AI hosts discuss the key ideas from your uploaded documents.

### What you could try...

Upload a report or meeting notes and ask NotebookLM to “summarize the key points” or “generate possible next steps” — then compare its output to your own notes.

Timeline of Main Events

This timeline tracks the development of Generative AI, specifically language models (LLMs) like ChatGPT and writing practices, based on source material.

Early 2000s:

- 2001: Kress and Van Leeuwen

Try it at

<https://notebooklm.google/>

 View Chat

# Additional insights

## You can run LLM's locally

Keep your data private, exploring models freely, and have offline access. You can run large language models locally on your machine using tools like [Jan](#) and [Ollama](#), provided your hardware meets the requirements.

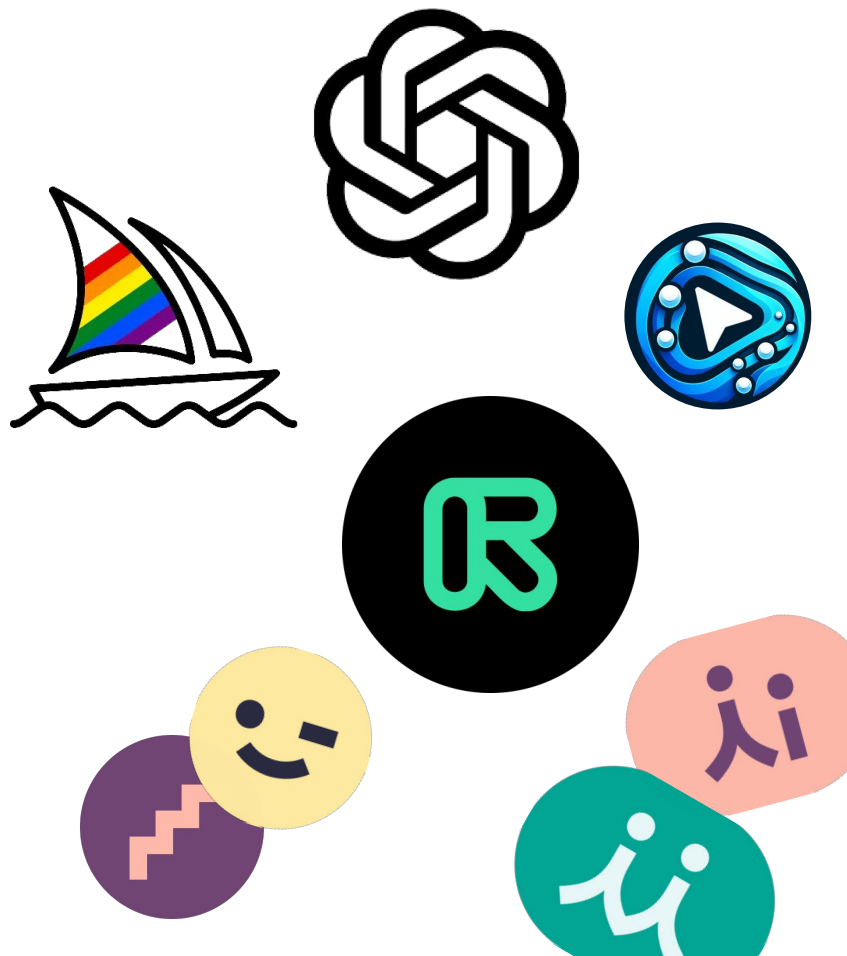

## From personal use to products

Commercial LLMs like ChatGPT often serve as the foundation for products and services. A good use case can evolve into a product by leveraging LLMs via APIs. See [OpenAI's developer platform](#) for an example of how the developer side looks.

# Visual

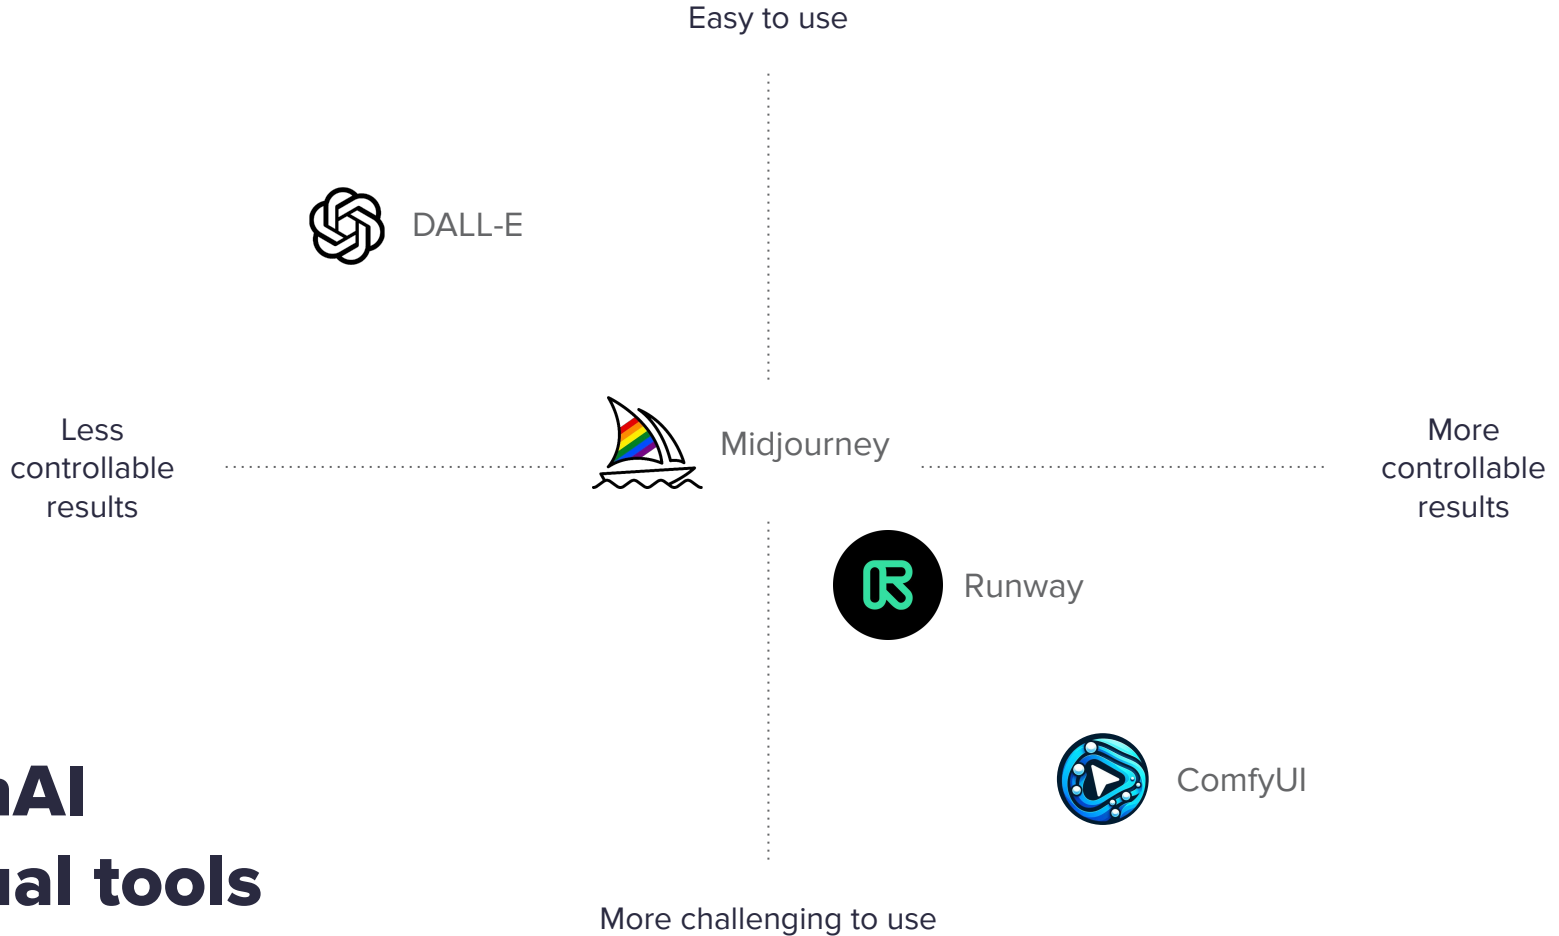

Generating images and video

and their use cases

# GenAI visual tools

MinnnaLearn

OpenAI

# DALL-E

Part of ChatGPT paid plan

DALL-E turns your text prompts into images

Did you know 

DALL-E is the same technology behind the *Bing Image Creator* that you can [try for free](#).

## What you could try...

See how specific you can make the images you create? Can you make them fit your brand, product and the story you are telling? What are the strengths and weaknesses of this system?

Here's another whimsical image of a dancing carrot on the moon! Let me know if you'd like changes or additional details.

Create a cartoon image of a carrot standing on top of the moon surface.

You can click on an image and make tweaks and changes by prompting and highlighting in ChatGPT.

Here is a cartoon image of a carrot standing proudly on the moon's surface. Let me know if you want to add or change anything!

Try it at [chat.openai.com](https://chat.openai.com)

Message ChatGPT

Midjourney, Inc.

# Midjourney

[Paid subscription](#)

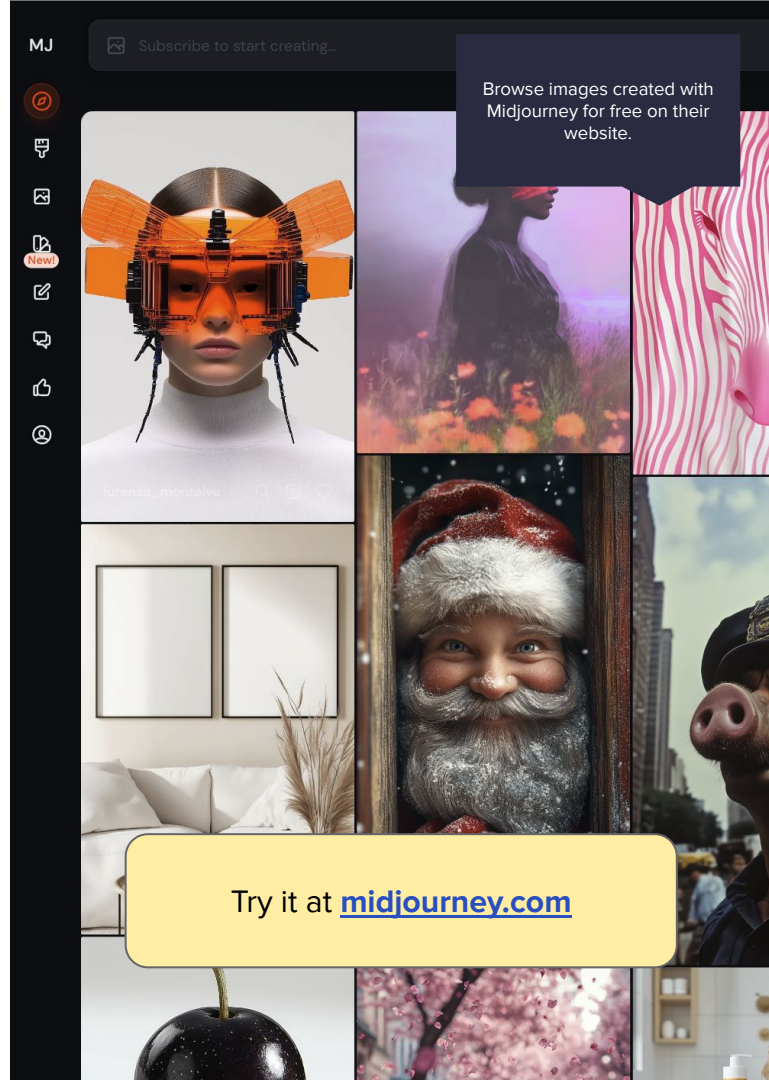

An AI tool that creates images from text descriptions, popular among artists and designers for concept visualization.

## Did you know

Midjourney started as a service you could only access through Discord? It's come a long way since then and now offers browser interface.

### What you could try...

Watch the [quick start guide video](#) and think if the features and workflow fits your work. How does this differ from the more simple tools like DALL-E?

Comfy Org

# ComfyUI

A node-based UI for [Stable Diffusion](#), ideal for highly controllable and complex workflows in AI-generated image creation.

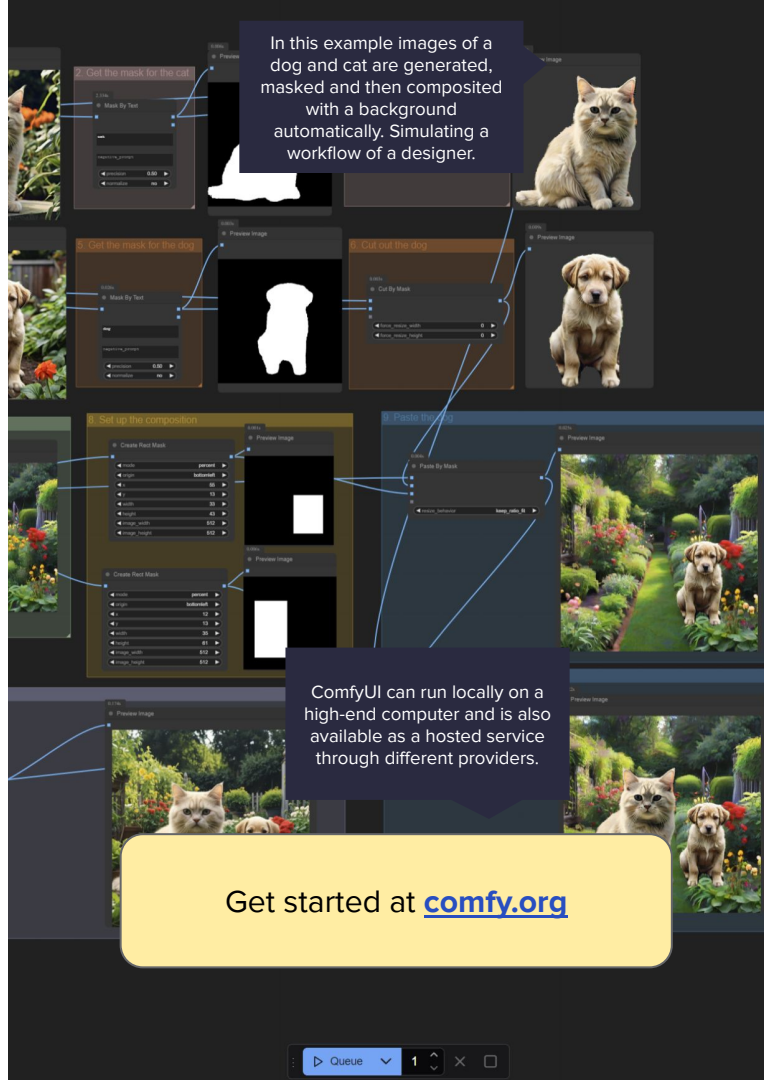

## Did you know

ComfyUI is for tech savvy users who need detailed customization of AI-generated images or want to create controlled outputs not possible with simpler tools.

### What you could try...

Explore transforming a phone photo into a professional product or portrait shot with a [relighting workflow](#).

Free / Open source  
For local installation check system requirements  
Paid hosted options available

Runway AI, Inc

# Runway

A creative suite for generating and editing video, images, audio and 3D content using AI.

Did you know 💡

AI video generation can produce stunning results - yet can struggle with persistency of objects, physics and deformations in characters and details.

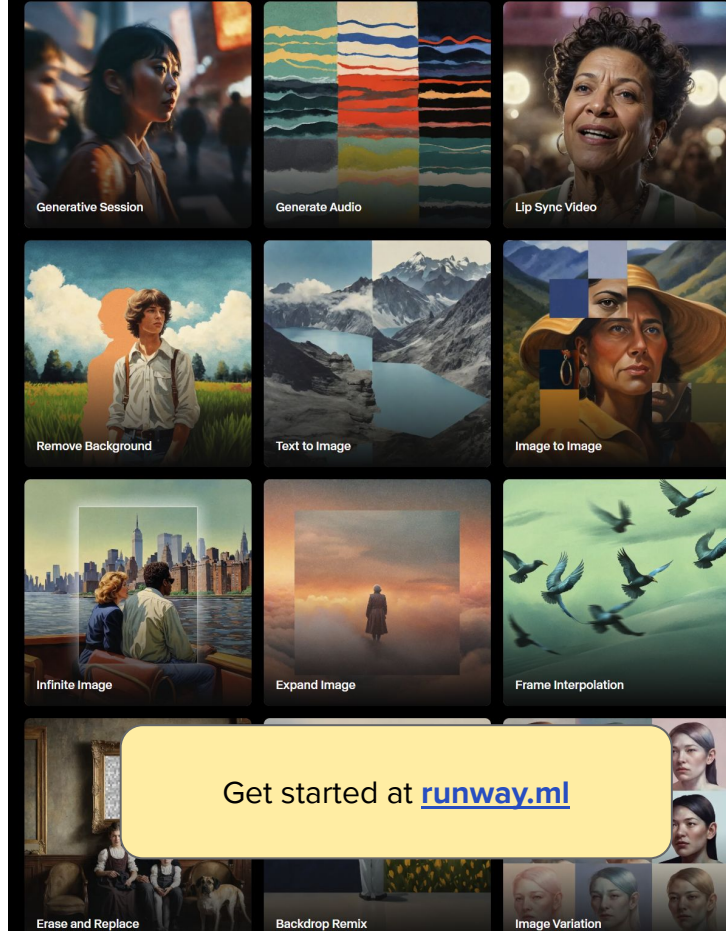

## What you could try...

Create a free trial account and do the [Generative Visual Effects tutorial](#) to learn how to blend live action video with generative visual effects.

Free limited trial  
Paid subscription starting at \$144 / year  
[Generation limits through credits/tokens](#)

## All Tools

Video tools Image tools Audio tools 3D tools

OpenAI

Part of ChatGPT paid plan

[Generation limits through credits/tokens](#)

# Sora

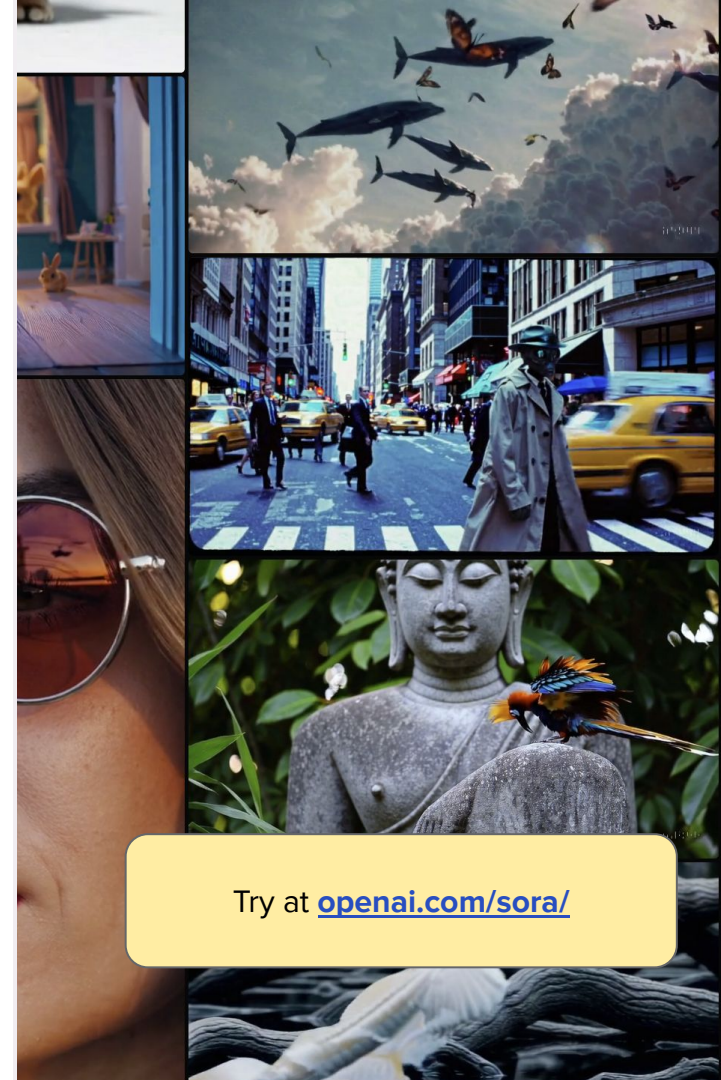

A video generation model, designed to take text, image, and video inputs and generate a new video as an output

## Did you know

Sora has a Remix tool that allows you to replace, remove, or re-imagine elements in your video - giving you more control.

### What you could try...

Test the limits of Sora. What happens when you generate a drone shot of a mountain versus generating a pack of dogs playing with a stick.

Try at [openai.com/sora/](https://openai.com/sora/)

Luma Labs

Free trial

[Paid subscription / credit system](#)

# Dream Machine

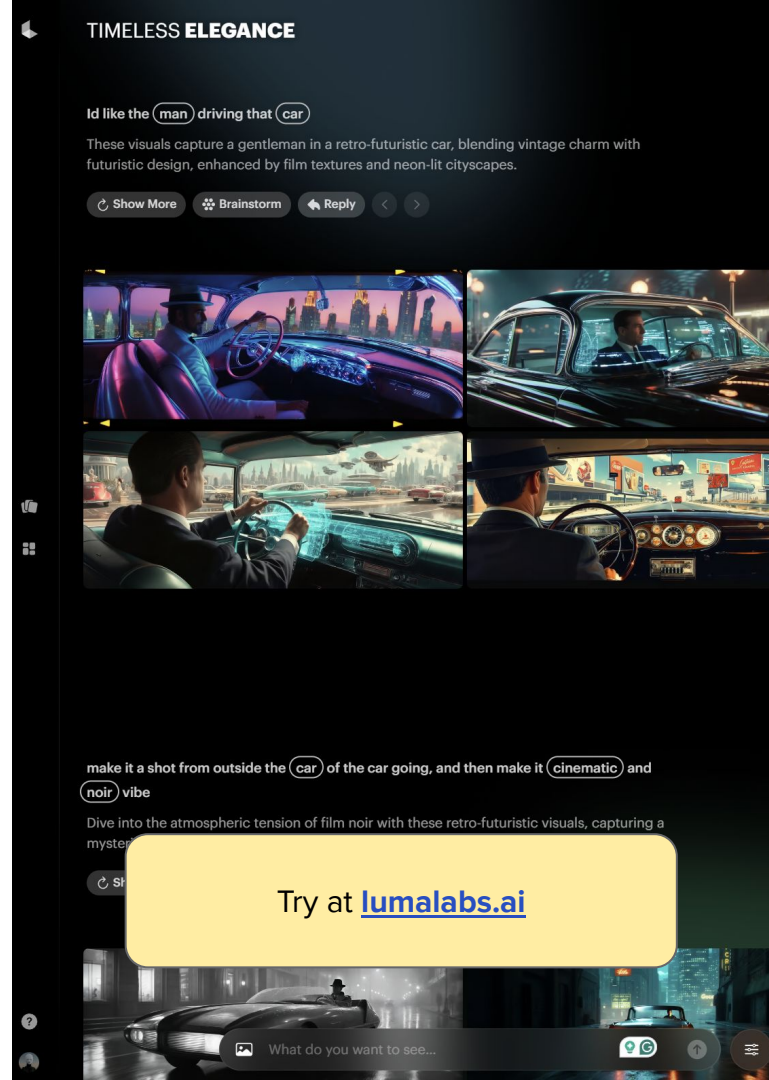

Generate videos from text prompts or images.

## Did you know

The final output might not always match the user's exact vision or expectations. This discrepancy between imagination and generated result can be frustrating for creators seeking precise control over their projects.

### What you could try...

Follow the [getting started guide](#) to try to create and refine animated videos in Dream Machine

# Additional insights

## Explore AI models on Hugging Face

[Hugging Face](#) offers free tools to test AI models, such as [Flux](#) for text-to-image generation and [Trellis](#) for text-to-3D. It's a great platform to experiment with cutting-edge technology.

## Why credits for generation?

Many AI services use a token or credit-based payment system because generating outputs requires significant computing power—similar to how a render farm handles 3D rendering.

Udio

Free trial

[Paid subscription / credit system](#)

# Udio

A generative artificial intelligence tool that produces music based on simple text prompts similar to Suno.

## Did you know

Tools like Udio and Suno can create songs in unique genre combinations and in many languages. Say a K-pop song in the style of a Spanish tango with lyrics in Finnish.

### What you could try...

Try generating a song with the same prompt in Udio and Suno to see how they differ. Which service offers you a better result and more control?

# Make your music

Create any song. Just describe it.

 A song about socks disappearing in the wa  [Create](#)

ElevenLabs Inc.

# ElevenLabs

Free trial

[Paid subscription / credit system](#)

Generate lifelike spoken audio with AI tools. Turn text to speech, change voices, create sound effects and more.

## Did you know

ElevenLabs can clone voices and supports multiple languages. On their site, you can see a demo of an English spoken podcast translated into Hindi.

### What you could try...

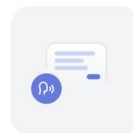

Test by having your content read out loud by the system. Does it fit your brand and tone? Does the voice sound natural or uncanny?

 zapier

*Glide*

# Automation

Repeating processes with the help of AI

Examples of AI tools  
and their use cases

Zapier Inc.

Free limited plan  
[Paid subscription](#)

# Zapier

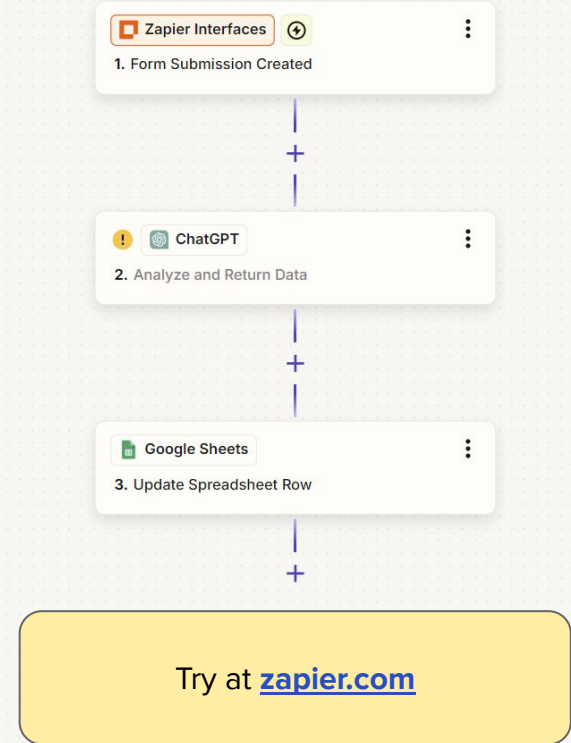

A no-code automation tool that connects apps, services, and AI tools to simplify workflows and save time.

## Did you know

Zapier integrates with AI tools like ChatGPT to analyze data, generate insights, and automate repetitive tasks.

### What you could try...

Set up an automation to analyze form responses using ChatGPT for sentiment or keyword extraction, and automatically transfer the enriched data into a Google Sheet for further analysis.

Glide

Free limited plan  
[Paid subscription](#)

# Glide

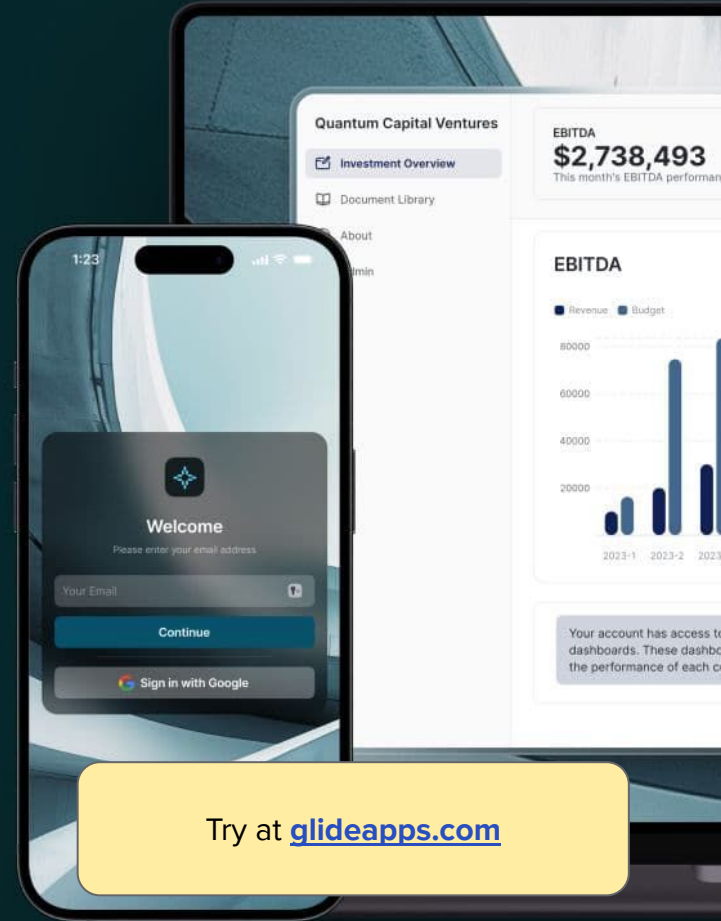

A no-code platform that turns spreadsheets into custom mobile and web apps, with AI integration for enhanced functionality.

## Did you know

Glide can connect to AI tools like OpenAI APIs to add smart features like automated recommendations or chatbot interfaces.

### What you could try...

Browse the [template gallery](#) and try one of the projects to gain insight on how this might help you build your own solution.

Try at [glideapps.com](https://glideapps.com)

Formagrid, Inc.

Free limited plan  
[Paid subscription](#)

# Airtable

A flexible database tool that combines the simplicity of spreadsheets with AI integrations and no-code application building.

## Did you know

Airtable lets you automate workflows with built-in AI features and can integrate with OpenAI or other APIs via scripts or extensions.

### What you could try...

Explore Airtable's AI block or use it to structure project data before feeding it into another AI tool.

Get ideas for your app by testing the [Airtable Cobuilder](#) tool.

n8n

Free limited plan

# n8n

An open-source workflow automation tool that connects apps, APIs, and AI tools to automate processes using low-code logic.

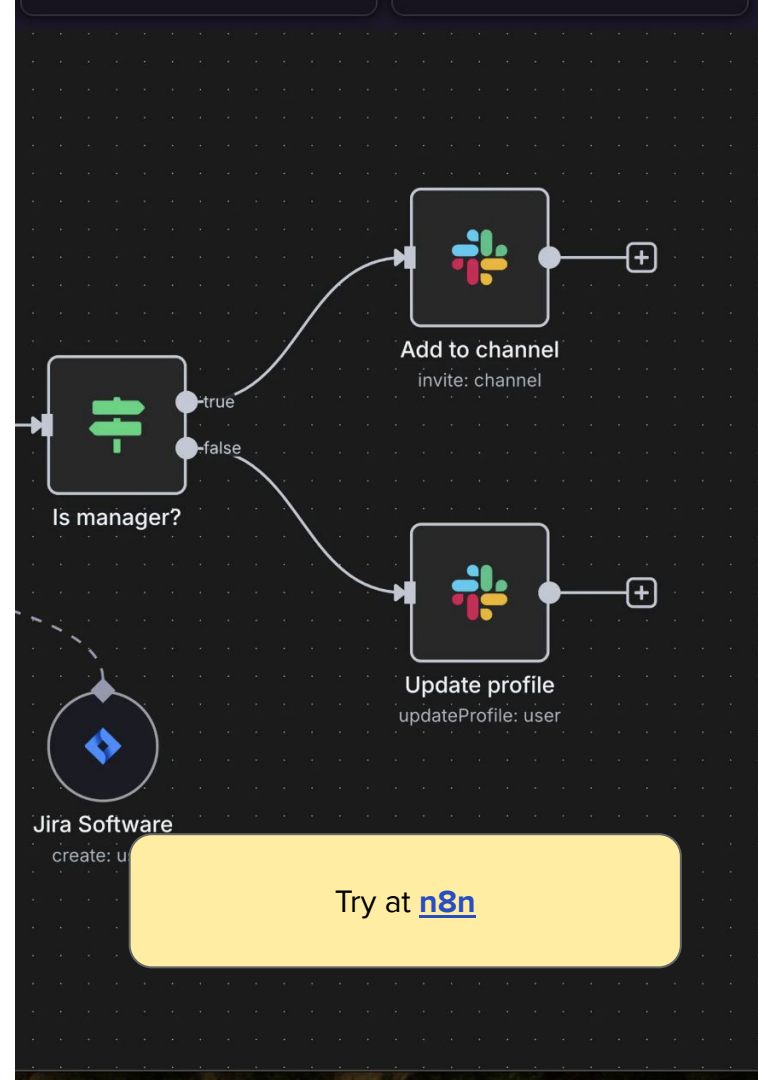

## Did you know

n8n lets you build AI-powered workflows by connecting models like OpenAI to your data and tools — and you can self-host it for full control over data and privacy.

### What you could try...

Automate a simple AI workflow (e.g. summarize → classify → send).

Use n8n to connect AI tools with forms, emails, or support tickets.

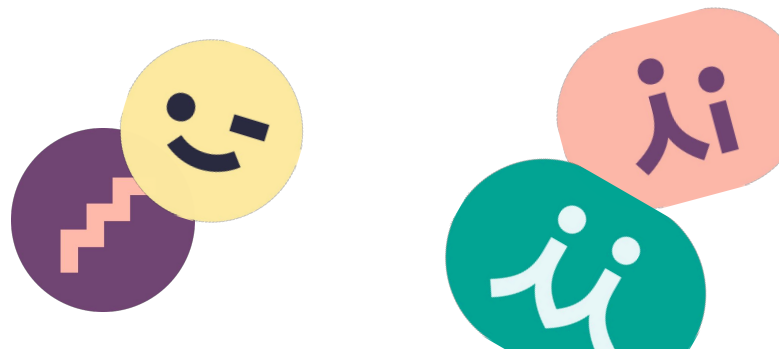

MinnaLearn

CURSOR

# Software Engineering

Developer Tools and Platforms

Examples of AI tools  
and their use cases

Anywhere

# Cursor

A code editor with intelligent code suggestions and natural language commands.

## Did you know

Cursor lets you chat with an AI that sees your codebase, current file, and cursor position, so you can ask it things like: "Is there a bug here?"

### What you could try...

Test if Cursor can refactor a function by simply describing the desired changes in natural language.

Free limited plan  
[Paid subscription](#)

Cursor is based on VS Code and retains compatibility with existing extensions, themes, and keybindings, allowing developers to seamlessly transition and incorporate their preferred tools and settings

Lovable.dev

# Lovable

[Billing based on usage](#)

Create apps and websites by chatting with AI. Designed for developers and entrepreneurs alike, it bridges idea to implementation in minutes.

## Did you know

Lovable combines LLMs (like those from OpenAI and Anthropic) with its own proprietary tools to generate deployable code — and often handles everything from user authentication to database integration and even Stripe payment setup.

### What you could try...

Ask Lovable to build a simple app or dashboard — like a task manager or internal tool. You can use the free tier for testing (e.g., daily credits). Non-coders and founders alike have successfully launched **MVPs** and **prototypes** with minimal prompts.

MinnaLearn
